Lithologic description and paleontologic sampling Neutron tools consist of a source of neutron radiation and a detector. High-energy neutrons are emitted from the source, During the drilling of TW-26, drill cuttings were collected pass through the fluid column and casing, and into the about every 5 ft and their lithology was described in field formation. Neutrons logs are used to estimate water content notes recorded at that time (Gail D. Mitchell, USGS, written and porosity for saturated sediments. If the formation commun. , 1978). Because reverse-air rotary drilling method contains a relatively large quantity of water, more neutrons produces pulverized rock samples, the descriptions provide will be moderated and captured by the hydrogen atoms in a general identification of rock type, but do not provide the water, and fewer neutrons will be reflected back to the adequate paleontologic samples for reliable age dating. detector. Thus, the greater reflected neutron radiation, the Consequently, the entire...
