Bulletin - Agricultural Experiment Station, Rio Piedras Volume 23-30

By University of Puerto Station

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 edition. Excerpt: .is practiced, varieties maturing in the dry season offer an advantage over those ripening in the season of heavy rains. Of the coffees tested, three members of the Arabian group--Columnaris, Maragogipe, and San Ram6n--mature considerably later than does 88926--24 8 the Porto Rican variety. These are followed by the robustoid group, and later still by the Liberian group, of which Excelsa appears to be the latest. The three groups hi which the coffees of commercial interest have been placed were clearly divided as to cherry size, except in case of Maragogipe (large) and Excelsa (small). The Liberian group contains large cherries, and the robustoid group small cherries, nearly twice as many of the latter as of Porto Rican being required to fill a given measure. The variation in weight of an almud of cherries was slight. The reduction in weight from cherry to marketable...
